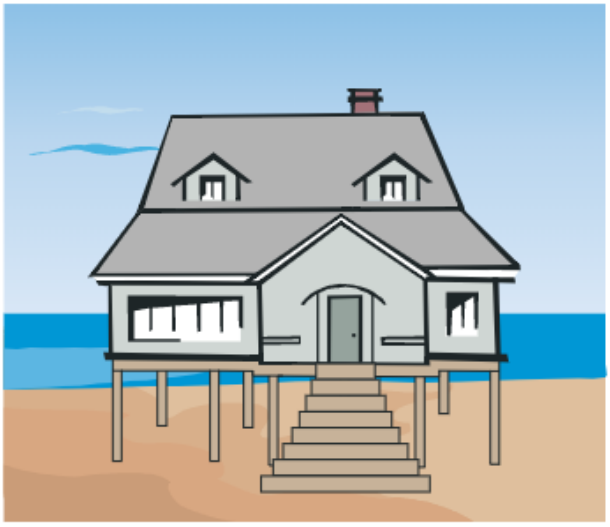
Kein Debdeb:

A house near the ocean in Surfside, New Jersey, is built on stilts.

Sometimes, when buildings are built near areas that are likely to flood, they are built on stilts. This allows the house and its contents to remain safe if the area floods. An example is shown in Figure 1.

Figure 1. Stilt House



Your Task

In the questions that follow, you will make a claim about the effectiveness of stilts as a solution to flooding.

Kōṃṃan-Ippān ko:

Part A

Select the boxes to identify whether stilts on a house protect against or do **not** protect against each of the actions.

	Protects Against	Does Not Protect Against
Household objects being washed away	☐	☐
Water damage to floors	☐	☐
Water damage to household objects	☐	☐
Yard flooding	☐	☐

Part B

Select **three** conditions that the stilts must meet to allow a building and its contents to remain safe if the area floods.

- ☐ cost a lot of money
- ☐ resist strong water current
- ☐ match the building’s appearance
- ☐ support the weight of the building
- ☐ be tall enough to keep the building out of water

Part C

Choose **three** problems that could be caused by using stilts under buildings.

- ☐ Buildings with stilts provide a better view.
- ☐ The stilts will get wet during a storm or flooding.
- ☐ Buildings would be damaged if stilts were to fail.
- ☐ Buildings are harder to enter because of stairs and ramps.
- ☐ Stilts can cause buildings to move side to side in high winds.

Part D

Are stilts a good solution to allow a building and its contents to remain safe if an area floods?

Click on each blank box to select the word or phrase that completes the sentences.

Stilts could be a [▾] solution to flooding because they [▾]. This means that [▾].

Kajjitōk Rot: Kōkal im Uwaak – Eaitok Uwaak (2 point)

A student is writing a report for English class about folk heroes. Read the draft of his introduction and conclusion and complete the task that follows.

You may never have heard of John Chapman, but you probably have heard of Johnny Appleseed. He was an American folk hero and pioneer who was born in Massachusetts in 1774. When he was eighteen years old, he decided to help the pioneers who were moving west. He had a dream of growing apple trees and giving apple seeds to them. That way, they would never go hungry.

Many people said that Johnny was a cheerful and generous man who loved the wilderness and was gentle with animals. What he is most known for today, though, is walking the countryside and planting apples. He did this for almost fifty years. To this day, many festivals are held every year to honor him. Next time you bite into a crispy, juicy apple, thank Johnny Appleseed.

The student took these notes from credible sources:

- Planted seeds along roadways, forests, and near rivers
- Traveled from Massachusetts to Pennsylvania
- Spent 50 years walking the countryside
- Stayed ahead of settlers
- Planted apple seeds along roadways and in forests as he moved west
- Planted seeds anywhere pioneers would settle
- Got seeds for free from cider mills and kept them in leather bags
- First nickname was the "apple seed man"
- Later called "Johnny Appleseed"
- Made friends with Indian tribes
- Learned some Indian languages
- Lots of festivals named after him
- Children loved him and listened to his stories
- Was generous and kind
- When invited for a meal, would not eat until the whole family had had enough food
- Was kind to animals
- Bought a horse that was going to be put to sleep and gave the horse to someone needy to keep his promise to treat the horse kindly
- Wore apple sacks for clothing and gave nice clothes to settlers

Write one or two body paragraphs using appropriate details from the student's notes to explain the "man behind the legend" without repeating the ideas presented in the first and last paragraphs.

Ñan bōk ruo point, juon ri-jikuuļ ej aikuj in leļǫk im ļōmņak ko ekkar/wūn ko/details im/ak kein kaņool me ej jepake ļōņnak eo eļap/thesis/ļōmņak eo ej dāpdep kōn lukkuun armej eo ālikin bwebwenato eo an Johnny Appleseed bwe en kaalikkar kadkadin im ebwe ilo an kōmmeļeļe ļōmņak ko im ej kōjerbal naan ko/kajin ejejjet.

- First nickname was the "apple seed man"
- Later called "Johnny Appleseed"
- Made friends with Indian tribes
- Learned some Indian languages
- Lots of festivals named after him
- Children loved him and listened to his stories
- Was generous and kind
- When invited for a meal, would not eat until the whole family had had enough food
- Was kind to animals
- Bought a horse that was going to be put to sleep and gave the horse to someone needy to keep his promise to treat the horse kindly
- Wore apple sacks for clothing and gave nice clothes to settlers

Write one or two body paragraphs using appropriate details from the student's notes to explain the "man behind the legend" without repeating the ideas presented in the first and last paragraphs.

John Chapman traveled from Massachusetts to Pennsylvania, keeping ahead of the settlements. Every year, he planted apple seeds farther west. He carried a leather bag filled with apple seeds that he collected from cider mills. He would take the seeds from the bag and plant them along roadways, in forests, and in other places where pioneers settled. He was soon known as the "apple seed man" and later as "Johnny Appleseed." Sometimes on his travels, he would be invited to have a meal with a pioneer family. He would not start eating, though, until he knew the whole family would have enough food. The children loved his stories, and their

Kein Depdep:

Sparks fly off the wheels of a train when the brakes are applied.

Click the small gray arrow to see a demonstration of this happening in Animation 1.

Animation 1. Braking Train

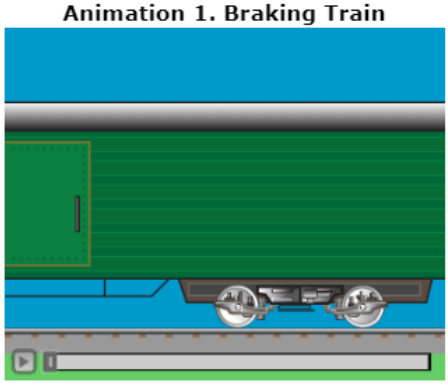

Table 1 explains some properties of the train and its surroundings as energy flows throughout the system.

Table 1. Properties of the Train System

Before Brakes Are Applied	After Brakes Applied
No sparks	Sparks fly off the wheels and brake pads
Brake pads make no sound	Brake pads make sound
Brake pads are cold	Brake pads are hot
Wheels are warm	Wheels are hot
Rails are warm	Rails are warmer
Train is moving fast	Train is moving slow

Your Task

In the questions that follow, you will analyze what happens to the train when the brakes are applied.

Kōṃṃan-Ippān ko:

Part A

Click on each blank box to select the word or phrase that completes each sentence, constructing an argument about what happens when the train's brakes are applied.

Applying the brakes causes the [▾] to transfer kinetic energy to the [▾]. This causes the [▾] to slow down and have [▾] kinetic energy, which slows the train.

Part B

When the train applies its brakes, what happens to the energy of the surroundings?

Ⓐ The surroundings gain energy.

Ⓑ The surroundings lose energy.

Ⓒ The surroundings do not gain or lose energy.

Ⓓ There is not enough information to determine the energy of the surroundings.

Part C

Which **three** statements support your choice in part B?

☐ The train maintains its speed.

☐ Sound is produced.

☐ Sound is consumed.

☐ Light is produced.

☐ Light is consumed.

☐ Heat is produced.

☐ Heat is consumed.

Part D

Select **three** pieces of evidence that would support the claim that the kinetic energy of the wheels changed form.

☐ The brakes give off energy as heat.

☐ The brakes make a screeching sound.

☐ The brakes undergo a chemical reaction.

☐ The sparks that fly off the wheels give off light.

☐ The potential energy of the train increases as it slows.

Wāween Score:

Ri-jikuuļ eo ej bōk 2 point ko ilo Mōttan A kōn men kein me rej ļoor:

- Ri-jikuuļ eo ej kāālōte "neen wa" ("wheels") ilo blank eo kain kajuon im "būreek ko" ("brakes") ak "rail ko" ilo blank eo kein karuo. (1 point)
- Ri-jikuuļ eo ej kāālōte "neen wa" ("wheels") ilo blank eo kein kajilu im "dikļoļk" ("less") ilo blank eo kein kaemān. (1 point)

Part A

Click on each blank box to select the word or phrase that completes each sentence, constructing an argument about what happens when the train's brakes are applied.

Applying the brakes causes the [wheels ▾] to transfer kinetic energy to the [brakes ▾]. This causes the [wheels ▾] to slow down and have [less ▾] kinetic energy, which slows the train.

Ri-jikuuļ eo ej bōk 1 point ilo Ṃōttan B kōn an kāālōte "Meļan ej bōk kajoor" ("The surroundings gain energy").

Part B

When the train applies its brakes, what happens to the energy of the surroundings?

- (A) The surroundings gain energy.
- (B) The surroundings lose energy.
- (C) The surroundings do not gain or lose energy.
- (D) There is not enough information to determine the energy of the surroundings.

Ri-jikuuļ eo ej bōk 3 point ko ilo Ṃōttan C kōn an kāālōte men ko me rej ļoor:

- "Ej kōṃṃan aninkien" ("Sound is produced").
- "Ej kōṃṃan meram" ("Light is produced").
- "Ej kōṃṃan bwil" ("Heat is produced").

Part C

Which **three** statements support your choice in part B?

- [ ] The train maintains its speed.
- [x] Sound is produced.
- [ ] Sound is consumed.
- [x] Light is produced.
- [ ] Light is consumed.
- [x] Heat is produced.
- [ ] Heat is consumed.

Ri-jikuuļ eo ej bōk 3 point ko ilo Ṃōttan D kōn an kāālōte men ko me rej ļoor:

- “Būreek ko rej leļọk kajoor āinwōt bwil.” (“The brakes give off energy as heat.”)
- “Būreek ko reļap ekkeroro” (“The brakes make a screeching sound”).
- “Kijeek me ej keļọk jān ne ko ej kōṃṃan meram” (“The sparks that fly off the wheels give off light”).

Part D

Select **three** pieces of evidence that would support the claim that the kinetic energy of the wheels changed form.

- [x] The brakes give off energy as heat.
- [x] The brakes make a screeching sound.
- [ ] The brakes undergo a chemical reaction.
- [x] The sparks that fly off the wheels give off light.
- [ ] The potential energy of the train increases as it slows.
