

**Common Questions about Computer-Based Writing Assessments for elementary students**

**Can Young Students Write On Computers?**

In 2012, the National Assessment of Educational Progress (NAEP)—a nationwide test given to a sample of students each year—conducted a trial of computerized 4<sup>th</sup> grade writing assessments.

- 13,000 students participated nationwide, completing either three 20-minute writing exercises or two 30-minute exercises.
- The results demonstrated that students were able to compose responses that allowed evaluators to measure their writing skill.
- Students also successfully edited text using word processing tools, such as spell-check and backspace functions.

**What about students without access to computers?**

The NAEP study asked students about their computer use. All students had access to a computer at school, and more than nine in 10 had access to a computer at home.

The best way for students to prepare for computerized assessments is for teachers to integrate writing on the computer into the curriculum throughout the year.

**Did Smarter Balanced test the assessment with young children?**

In 2013 and 2014, Smarter Balanced conducted tryouts of the test with millions of students and specifically examined how elementary school students performed using computers. Most elementary school students had no trouble using the computer to complete the questions related to writing.

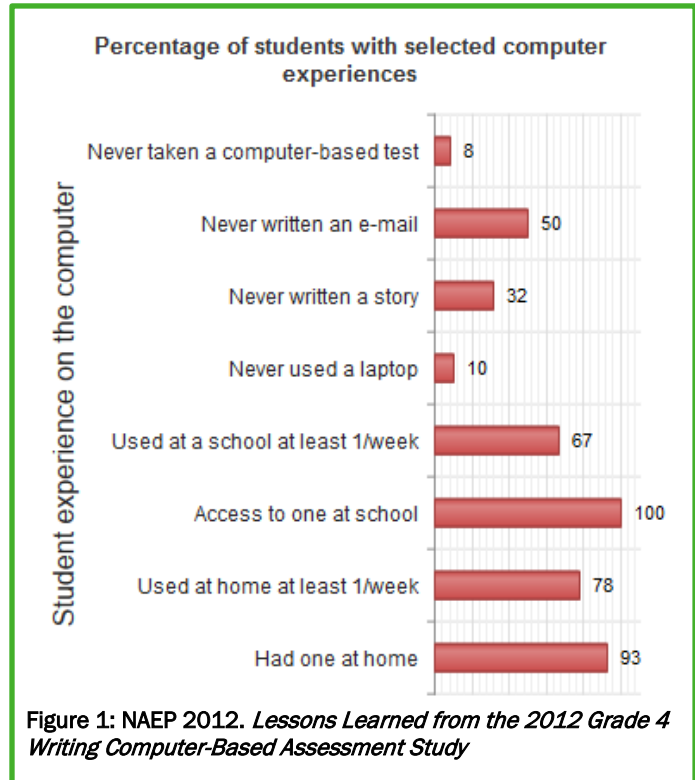

**How much will young children be expected to write on the Smarter Balanced Summative Test?**

In grades 3-5, students will respond to two short-answer reading questions and one brief writing item that ask them to write a paragraph. In addition, the performance task portion of the assessment will include two short-answer research questions and one longer writing response similar to the two grade 3 samples below.

**Building Writing Skills Grade by Grade**

Effective writing is an essential skill for success in college and the workplace. The Common Core State Standards outline a progression of expectations in writing at each grade level to ensure that students develop the sophisticated writing skills they will need by the time they graduate.

The Smarter Balanced Assessment System provides a meaningful way to measure writing at every grade—an important improvement over most statewide tests. The tests include a variety of questions that assess writing skills, such as spelling, punctuation, revision, and editing. In addition, students compose short and long responses for several writing purposes. In elementary grades, these purposes are: narrative, informational, and opinion.

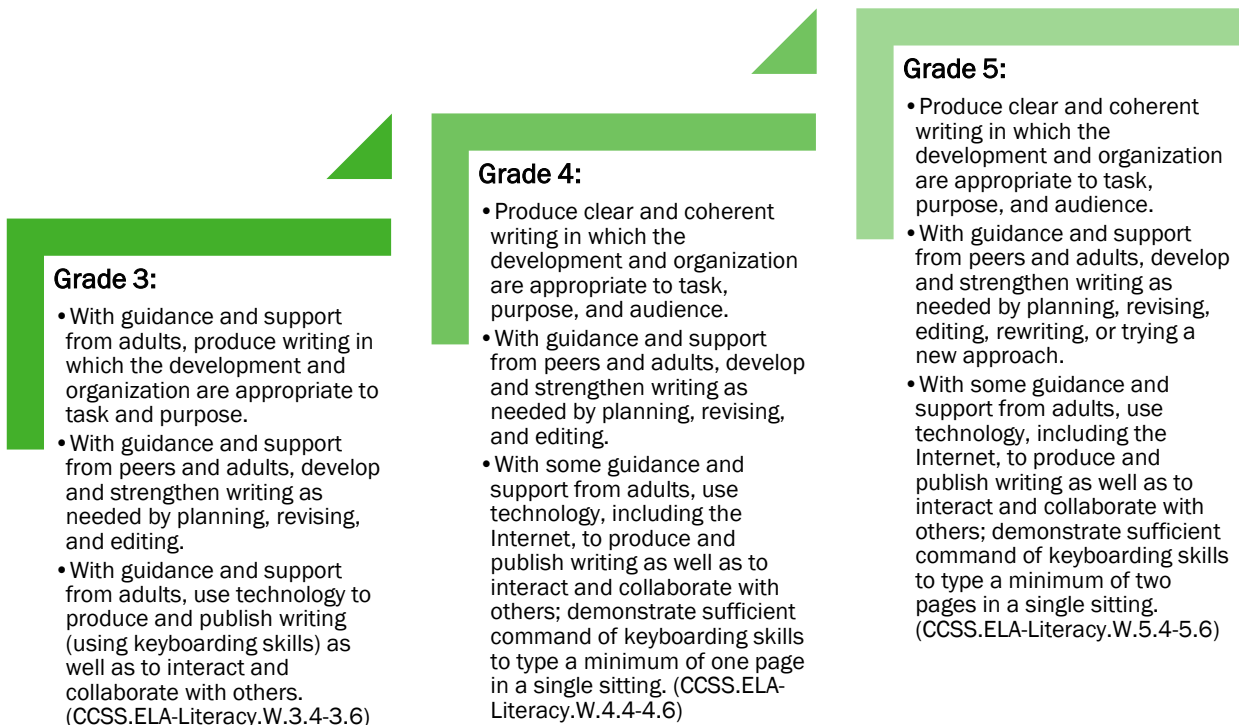

The Smarter Balanced assessments are administered online. Students type their responses on a keyboard and have access to editing tools that allow them to revise their work. Because the test is untimed, students can work at their own pace.

The shift to online assessments brings many benefits, but as with any test, it is critical that young students also have the support they need to succeed. To help students prepare, schools are incorporating computers into classroom instruction in the elementary grades to allow students to gain familiarity with technology and develop keyboarding skills. Smarter Balanced has also made Practice and Training Tests available online to help students prepare for the new assessments.

### Appropriate Expectations for Writing

The Common Core emphasizes the importance of developing writing skills in the elementary grades. In addition, the standards call for students to use computers to compose and publish writing—a minimum of two pages in a single sitting by 5<sup>th</sup> grade. Teachers are focusing on writing skills throughout the year so that students can be prepared for the demands of middle and high school.

**Figure 2: Grade-by-Grade Progression of Common Core State Standards for the Production and Distribution of Writing**

### Helping Students Prepare

Online Practice and Training Tests allow students to gain familiarity with the types of questions and the test interface. Students can practice navigating test questions, responding to writing prompts, and using features like spell check. The tests are designed with the same features included in the year-end assessment, including all embedded universal tools, designated supports, and accommodations. These tests are available online at any time:

<http://www.smarterbalanced.org/practice-test/>.

### Scoring Student Writing on the Performance Task

Writing on the Smarter Balanced assessments will be scored in much the same way as traditional paper-and-pencil assessments. Trained scorers read every response and assign a score in each of three categories:

1. Organization/purpose of the writing;
2. Evidence/elaboration (use of evidence, details and development); and
3. Adherence to correct conventions (spelling, capitalization, punctuation, etc.).

These scores are then combined for a total of six potential points.

Readers evaluate student responses for the quality of writing—not the quantity. Students may demonstrate their skills in a relatively short response. Figure 3 shows a 3<sup>rd</sup> grade response that received three of four potential points for organization.

**Figure 3: Grade 3, Narrative – Scored Only for Organization and Purpose, Sample 3-Point Baseline Anchor Response**

**Response** Once there was a boy named Chris he and his family decided to take a long trip on the Mayflower. It was not an easy ride on the Mayflower they packed and packed their supplies and finally they arrived on the Mayflower. There were big storms and most of the food went bad or moldy. Life wasn't even close to easy on the Mayflower, but the Pilgrims' and Chrises family put seasoning on their food to make it taste better. There wasn't very much space with the food, the families, and the clothes most people thought the Mayflower was a big ship, not when it was full like this. Anyway they sailed and sailed and so on they sailed it has only been one month, and the weather has not been fabulous at all, and it needed to be so they could cook or roast their food. On rough days' like these some food will have to be eaten cold.

**SCORE POINT**

**3**

The organization of the narrative is adequately sustained, with a maintained focus. There is an evident plot about a family's trip on the Mayflower, and the setting (onboard the Mayflower) and characters (Chris and his family) are adequately maintained. There is adequate use of a variety of transitional strategies to clarify relationships between ideas (*finally they arrived on the Mayflower...Life wasn't even close to easy on the Mayflower, but the Pilgrims' and Chrises family put seasoning on their food to make it taste better*) and an adequate sequence of events. The opening (*Once there was a boy...*) is adequate, but there is no closure.

When it comes to writing conventions—such as spelling, grammar, and punctuation—young students are not expected to produce writing that is completely error free. For example, figure 4 shows a 3<sup>rd</sup> grade response that received two out of two potential points for conventions, despite a few errors.

Figure 4: Grade 3, Conventions, Sample 2-Point Baseline Anchor Response

<b>Response</b>	<p>First, I would like to be astronaut when I grow up. But it would take a long time to be an astronaut. It would awesome to go on the moon. I would not want to go in space because I do not want to get sick. I wonder how hard is training? I <u>wounder</u> how long astronauts have to stay in space? I wonder if jars come open easily in space? I wonder what astronauts eat before they take off. I wonder if it is safe in space? I wonder how many people work as an astronaut?</p> <p>Next, you would have to have lots of training to be an astronaut. Probably a year for just classes. I would be scared to go in space the first time. You would have to eat right. I wonder how long you have to <u>excise</u> for every day.</p> <p>Middle, I would excise for <u>a</u> hour to go in space. I would eat fruits and veggies if I was an astronaut. I would be healthy and strong. I would not go up in space. It would be fun to be underwater astronaut. I would not like to get sick in space. I can not believe that you are <u>wait less</u> in space. I wonder how long you can stay in space? I wish i can live in space forever. That would be cool.</p> <p>End, I would love to be astronaut but it looks to hard. I would like to see the moon. It would be fun to be astronaut. I hope my friends will join me. I could see lots of different planets in a video.</p>
-----------------	--

<b>SCORE POINT</b>	2
<p>This response demonstrates an adequate command of conventions. There are few errors for the amount of writing present in this lengthier response. There are no grade-level errors in sentence formation, and only one capitalization error (failing to capitalize I in the third paragraph ). Some errors are present in grammar usage (<i>like to be astronaut, for a hour</i>), spelling (<i>wounder, excise</i>), and punctuation (missing a few end of sentence question marks).</p>
